

# CAUSE CARE CURE

**Motor neurone disease** is a rapidly progressive disease of the nerve cells that cruelly steals the power of speech, swallowing, movement and independence.

More than 1400 Australians are currently living with motor neurone disease. More than one person dies and another is diagnosed every day.

We urgently need to understand the **causes**, to provide **care** and to find a **cure**.

Your rapid response can help – act now

- DONATE
- SUPPORT your local MND association
- GET INVOLVED in events
- WRITE to your local MP urging them to support MND care and research
